TECHNICAL SKILLS

- **Languages:** Java, JavaScript, TypeScript, SQL, Python
- **Backend:** Node.js, Express.js, Next.js App Router, REST APIs, Zod
- **Frontend:** React.js, Next.js, Expo, Tailwind CSS
- **Databases:** PostgreSQL, MongoDB, Prisma, Redis
- **Cloud & DevOps:** Docker, GitHub Actions, CI/CD

EXPERIENCE

Software Engineer Intern | BranDive Media Solutions

Jul 2026 - Present

React.js, Next.js, Node.js, MongoDB, Recharts, Tailwind CSS, JWT

- Built DentalFlow, a multi-branch dental clinic management portal supporting 3 branches and 4 user roles, designing 14 MongoDB models and 49 REST API endpoints for appointments, medical records, prescriptions, invoices, and payments.
- Implemented JWT-based authentication and server-side role-based access control across patient, doctor, receptionist, and administrator workflows, and built an appointment-booking flow with four role-specific Next.js dashboards.
- Built Recharts analytics dashboards for revenue, patient growth, and doctor/branch performance, and produced ER diagrams, workflow documentation, and technical handoff materials.

Freelance Full Stack Developer | Independent

Nov 2025 - Present

React.js, Next.js, Node.js, Express.js, PostgreSQL, Prisma, MongoDB, Tailwind CSS

- Independently scoped, developed, and deployed full-stack web applications for clients across multiple domains, handling frontend and backend implementation.
- Built e-commerce and café applications with product/menu management, carts, customer ordering, and end-to-end order workflows, using responsive interfaces and scalable application architecture.

EDUCATION

Bachelor of Science in Computer Science (BSCS)

Expected 2027

UBIT, University of Karachi

PROJECTS

ServeFlow — Cafe Management & Ordering Platform | [GitHub](#)

Next.js 16, TypeScript, PostgreSQL, Prisma 7, Auth.js, Zod, Redis, Docker, GitHub Actions

- Built an end-to-end ordering platform on a 15-table PostgreSQL schema — menu, checkout, live staff queue, admin console — across three roles and 18 REST endpoints, with Docker and CI-gated through GitHub Actions.
- Made the server the sole pricing authority (clients never submit money values) and persisted price/name snapshots on order lines so historical orders survive menu changes.
- Enforced an order and payment state machine with 409 responses on illegal transitions and a full staff audit trail, plus service-layer RBAC returning 404 rather than 403 to prevent order-ID enumeration.

Wanderlust — Full-Stack Travel Marketplace | [GitHub](#)

Node.js, Express.js, MongoDB Atlas, EJS, Passport.js, Cloudinary, Mapbox

- Built a travel marketplace supporting listing creation, image uploads, reviews, full-text search, price filtering, and paginated discovery.
- Engineered booking logic to prevent overlapping reservations, calculate multi-night totals, support cancellations, and enforce guest-only cancellation.
- Secured state-changing workflows with Passport.js authentication, ownership-based authorization, CSRF protection, Joi validation, rate limiting, and NoSQL-injection sanitization.
- Integrated Cloudinary image storage and Mapbox geocoding with MongoDB GeoJSON for interactive listing maps.

Expense Tracker — Cross-Platform Mobile App | [GitHub](#)

React Native (Expo), Node.js, Express.js, MongoDB Atlas, JWT

- Built and shipped a single Expo codebase for iOS and Android with persistent JWT authentication using AsyncStorage.
- Designed RESTful APIs for authentication and expense CRUD operations, including server-side input validation and consistent error responses.
- Created reusable UI components and navigation flows with React Navigation and NativeWind for a consistent cross-platform user experience.

ACHIEVEMENTS

- **Certificate of Completion** — Web Development, Apna College, 2026
- **Certificate of Appreciation** — Participation in Inter-University Tech competitions, University of Karachi, 2026
